INTRODUCTORY.

"Medicine is not a rigid system of rules and formulæ, as it was in Ancient Egypt—a fixed creed, to which you are to subscribe, and from which you must not vary. It is a living, growing, thing—making use of every resource which the progress of science brings; testing all things, and holding fast to that which is good."—Dr. John S. Billings' Address to the Graduating Class. Bellevue Medical College, 1882.

In presenting to you this little pamphlet we have two objects in view. The first, to bring to your especial attention a consideration of the diseases of the gums and mouth, which, while so generally observed and known to exist, are passed by with a lackof that alarming apprehension of their baneful influence upon the comfort and health of those so afflicted, which they should arouse. Second, to present to you a few reflections on the cause of these diseases, and to ask your consideration of a remedy which, we believe, if used as directed, is almost infallible.

We have given these diseases a great deal of thoughtful attention, and experimented largely in their cure. After continued experiment and observation, we have discovered a happy combination of remedial agents, named by us Holmes' Sure Cure Mouth Wash, which we have no hesitancy in proclaiming the very best known. With it we have had most marked success in our practice. For a number of years we used it quietly, without appreciating to the fullest extent that it was TOO VALUABLE A REMEDY to have

such a circumscribed field of usefulness. Acting upon this belief, we then prepared and offered it to dentists generally. Fearing the natural prejudice in the profession to innovations of this kind we could not foreshadow its reception. But in this we were agreeably surprised. We soon learned that the profession were possessed of broader and less biased views than we had given them credit for, and were willing and ready to give a fair trial to that which they had reason to believe would be beneficial in their practice. A demand was at once created far and wide; and from many came the highest and most flattering testimonials, as will be noted, from a few of the many received, published in other pages in the pamphlet.

Being more and more convinced, from these evidences, of the merit of this MAGICAL PREPARA-TION, and from an increasing demand outside of the profession, from many who suffer from ulcers and inflamed mucous membrane of the mouth, soft and bleeding gums, bad breath, etc., we have decided to meet this demand by manufacturing HOLMES' SURE CURE MOUTH WASH more largely, and offer it to the people generally through Drug Stores, as well as the Dental Profession.

We believe we will be conferring a great blessing upon the thousands whose cases just simply using the Wash will reach. In many cases, of course, where tartar and uncleanly teeth are the cause of the disease, the dentist must be consulted and employed to remove the tartar and clean the teeth; then with the use of the Wash all cases can be reached, it matters not how bad or unpromising.

We have made some improvements in the Wash,

which, in addition to the virtues heretofore claimed for it, now make it a MOST VALUABLE AND USE-FUL DENTRIFICE. By wetting the brush with water and sprinkling a few drops of the Wash on it, and rubbing the teeth in the morning and at night before retiring, it affords one of the best dentrifices now known for keeping the gums hard and healthy, purifying the breath by its antiseptic and disinfectant properties, and aiding largely in preventing decay by its lubricating, detergent and an acid qualities.

To those of the dental profession who have not given Holmes' Sure Cure Mouth Wash a trial, we beg leave to say, be broad viewed and liberal minded enough to lay aside your prejudices, read some of the testimonials we present from some of the best and most progressive gentlemen in the profession—gentlemen, your peers in every respect—capable—keeping apace with every improvement, regardless of expense—honorable—would not recommend anything at any price which they did not conscientiously believe to possess the merit claimed—and be convinced, at least enough to give the preparation a trial before passing a final judgment on it.

To the people at large, who are the sufferers, and should be most interested, we ask you to read what leading dentists have to say of "Holmes' Sure Cure Mouth Wash." Also read what some of the people, who have experienced (we could produce hundreds and hundreds of certificates) the benefit of this preparation, and give it a fair trial, and we feel assured you will bless us for calling attention to HOLMES' SURE CURE MOUTH WASH AND DENTRIFICE.

SOME REMARKS ON THE GUMS.

Addressed to the Dental Profession.

PHYSIOLOGY OF THE GUMS.

The gums in a normal state, are made up of fibrocartilagenous tissue, with a larger proportion of the fibro e ement prevailing. They are tough and strongly endowed, and act as a protecting cushion about the alveolar process, and being insensible to a certain extent, afford a good firm border around the teeth in the act of mastication. A very heavy and thick mucous membrane forms the outer surface, under aid with a net-work of capillary vessels, making the membrane very vascular-the nerves of the gums are not very sensitive, and do not respond to any ordinary attack, only when diseased, and then they become peculiarly acute in their sensations, and by reflex action disturb other parts of the body. The mucous follicles are very large, and secrete quantities of mucous fluid to lubricate the gums and prevent abrasion in the friction of mastication. How beautiful and how perfect the gums! Nature has indeed performed a wonderful work in their structure and surroundings. They are, as it were, a setting to the teeth like gold to lovely pearls.

PATHOLOGY OF THE GUMS.

The gums in a diseased condition present a very striking contrast to the picture thus drawn. When diseased, how foul, how disgusting how loathsome and how injurious to health, comfort and beauty. Nature made them firm, hard and useful; they have become a mass of filthy accumulations. The vessels

through which the crimson tide flowed so beautifully. giving that exquisite tint so much admired in the gums, have become distended by congestion and burst upon the slightest touch. The secretions take on an acid character, becoming of en so acid as to dissolve even the enamel on the teeth, causing those sensitive grooves often seen around the teeth near the gums. The fluids becoming more and more vitiated, mingle with the saliva, and daily pass into the stomach. causing loss of tone in this organ and most distressing indigestion. A mouth of purest sweetness is turned into odor most foul, and every inspiration of fresh air intended to purify the blood is ladened with poisonous effluvia and taken into the lungs, affecting every part of the system. In short, the gums when attacked by disease and unchecked in its incipiency, but permitted to run its full course, become a conglomerated mass of pus and corruption, poisoning the secretions and blood, and indirectly breaking down the constitution of the victim so unfortunate as to be thus affected, ending often in death unless relief is afforded.

THE CAUSES OF DISEASED GUMS.

The causes of diseased gums are quite numerous. Among the primary causes, may be mentioned filthy habits, particles of food, coagulated mucous, and loosened epithelium scales allowed to remain between the teeth and on the gums, decomposing and lying in contact with the gums daily, producing irritation and increased vascular action, followed by congestion of the blood vessels, stagnation, and general breaking down of tissue, resulting in pus, etc. Accumulation of tartar is probably the most common source of irritation and disease; being deposited around the teeth and pressing on the gums, soon interferes with proper circulation, making a puffy, turgid condition, diseasing the mucous follicles, lining the muco-dental pits, destroying their secretive ability, and producing the usual train of evils resulting therefrom. In addition to these local causes there are some constitutional cond tions that tend to bring about abnormality in

the gums; but it is not necessary to mention them here. We have to deal more frequently with local causes and conditions.

TREATMENT OF DISEASED GUMS.

To cure any disease the cause must first be removed. As many of the cases of diseased gums met with in the ordinary run of practice, are produced by local causes, which consist mainly in deposits around the necks, and frequently upon the entire roots of the teeth, accompanied by inflammation, tumefaction, suppuration and wasting away of tissue, it naturally follows the first thing to be done is to remove these c.uses. This treatment is altogether operative, and consists in the removal of every particle of foreign substance from the roots of the teeth, not only that upon and in the vicinity of the necks, but that beneath the margin of the gums, and if necessary to the very ends of the roots, as far, at least, as the separation between them and the gums exists; often times in very extreme cases it is necessary to scrape the alveolar around and between the roots and excise any pieces of the process which may be necrosed. The whole surface of the roots exposed must be thoroughly polished. The operation must be heroic and thorough. As long as a particle of foreign substance remains upon the roots, just so long will the cure of the disease be unsatisfactory—the least particle will stand as a barrier to union between the gums and

To perform perfectly this first and important step in the cure of diseased gums, instruments especially designed, must be used to enable the operator to reach every part effectually. The chief cause of so many failures in radically curing diseased gums, lies in the lack of thoroughness in the first step. The treatment must be heroic. In addition to removing the tartar, if there is much congestion, etc., the gums must be scarified around the teeth, and all excrescent growths around and in the interspaces must be clipped

and cut away. The abrasion and breaking up of abnormal growths, is an important part of the work. This surgical and operative part of the treatment having been heroically and most thoroughly accomplished, it now becomes necessary to use therapeutical treatment to aid nature in her recuperative process. This is as necessary to complete a cure as the first step in the treatment. An experienced and learned professional says on this point: "We are confident that a large number of our most careful and experienced operators feel that something more than mere surgical treatment is required in very many cases of this disease, in order that permanent results of a favorable character may be realized. We also know that some of our best men get results by following the surgical with an intelligent antiseptic treatment never before obtained by other methods. We do not consider the Witzel method of treating this disease Pyorrhœa Alveolaris) as antagonistic to Riggs' method. but, rather, as supplemental to it, at least in many cases : and our own experience is sufficient evidence that the supplemental antiseptic treatment is as necessary to a complete cure as the surgical."

Application of Holmes' Mouth Wash.

After the surgical treatment, as before described, take an old instrument and wrap around the end of it a piece of cotton, (which makes a good mop.) and dipping it into the full strength of the wash, apply it around and between the gums, being careful to pump it, as it were, thoroughly around and under. In some cases where the septum and alveolar process around are affected, a syringe, to inject the wash between the teeth and way under the gums can be used to advantage. This must be applied once daily.

In addition, a bottle of the wash, full strength, must be given the patient, and instruct him to pour a tablespoonful into a fourth of a tumbler of water and

rinse the mouth, sucking it between the teeth three times daily—this proportion must be used each time, unless found too strong. The length of time necessary to keep up the treatment will have to be determined by the appearance and improvement in the gums. This is the treatment for diseased gums from causes before described. The wash can be used with great benefit in any inflamed or ulcerated condition of the gums or mucous membrane.

After the extraction of teeth there is nothing better as a styptic and antiseptic, or to heal and harden, and hasten absorption and preparation of the gums for the plate. For this purpose, direct patient to use at first a tablespoonful to a fourth tumbler of water, and rinse the mouth three times daily, and decrease strength as the mouth heals. Full directions accom-

pany each bottle.

Duty of each and every Dentist.

It is the duty of every dentist, in examining a mouth, to call special attention to any unhealthiness of the gums, and to impress upon the patient the great importance and necessity for cleanliness. When a dentist has a regular patient who reposes every confidence, and gives to him entire management of the teeth, and he allows the patient to go unwarned of diseased gums, even in its incipiency, the dentist cannot be too severely censured for such unpardonable neglect of duty. The evidences of the disease, in the first stages even, are too unmistakable, and no dentist can excuse himself if he fails to give warning, and insist upon the patient submitting to such treatment as will be necessary to establish a perfectly normal condition. It is admitted that it is a most disagreeable part of dentistry, and one which does not always yield such remuneration as it should, considering time, labor and unpleasantness; but if we have chosen dentistry as our avocation, it is our duty to execute every branch of it to the very best of our ability.

A VOICE OF WARNING.

Addressed to the People Generally.

It is a rare occurrence to find a perfectly healthy mouth, free entirely from even a trace of some form of disease. Few people are aware of the damaging consequences that arise from these diseases; very few realize, until often too late, the baneful effects on their constitution produced by them. It is not alone the effects upon the teeth which itself ought to be sufficiently arousing -but it is the serious inroads upon the very fountain sources of life, which should excite apprehension. Diseased gums generate putrid and offensive matter in the mouth, so that every particle of food taken into the stomach is impregnated therewith, and a long train of evils in this organ follows: such as dyspensia and the thousand and one disorders that to low improper digestion and assimilation of food. Diseased gums cause offensive and foul odors to laden the breath, so that every breath that is carried into the langs is vitiated, causing consumption and other d seases that fo low a lack of a full supply of pure air. We could enumerate and describe many, very many constitutional diseases caused by disorders of the gums and mouth, but hav'nt the space here. We morely desire to throw out a few hints of warning. Our main object in these remarks is to call attention to some of the diseases found in the mouth so that they can be recognized. and to offer a remedy which we believe will prove effective in the hands of thus, who give it a fair trial.

Read care fully the brief description of these discases, and if you finish there is the slightest symptom in your mouth, do not design a more into but take steps towards getting cured. Following we mention some of the most common diseases found in the mouth.

Riggs' Disease or Pyorrhœa Alveolaris.

This discuss is often met with. It is seldom that a mouth is seen without being affected to an extent more or less. The signs are unmistakable. At first the guns begin to lose their firm, hard, healthy appearance, a feeling of discomfort arises in the margin of gun around the neck of the teeth, the gum becomes more flabby and irritated, soon blood oozes out on touching and rubbing, the inflammation extends deeper, and the gums losing their attachment to the roots, fall away. The sulci formed thereby become filed with foul secretions of pus and blood. These indications prove more aggravated daily, until the teeth become loose, the breath more foul, and the general health affected and broken down if the disease is permitted to run its full course.

To cure Pyorrhea Alveolaris, consult your dentist and get him to remove every particle of tartar which has accumulated during the course of the disease, from the teeth on both crown and roots, and clean the parts thoroughly, then apply Holmes' Sure Cure Mouru Wash, full strength, once duly, and rinse the mouth with the wash, diluted by pouring a tablespoonful into fourth of a tumbler of water, several times daily. Continue the application until the gums are firm and healthy, and the teeth again attached perfectly. A Constant use of the wash as a dentrifice, as directed, twice daily, will aid very largely in preventing the disease and keeping the gums in a normal

condition.

Necrosis of the Alveolar Process.

The process sometimes becomes necrosed or dead, indicated by a dark, purple and swollen condition.

An off-nsive discharge comes therefrom.

To relieve, the necrosed bone must be scraped away by your dentist. Then apply Holmes' Sure Cure Mouth Wash, full strength, two or three times a day until a cure is effected.

Inflamed and Bleeding Gums Caused by Salivary Calculus Commonly Called Tartar.

There is not one mouth in a hundred that is entirely free from this trimble. Salivary Ca aims or Tartar, is a fared substance deposited from the sellival around the teath, more especially upon their necks and roots. It is constantly added to, and being root hard hards, irritates and inflames the gums, causing them to bleed and grow patrid and offensive; probing the gums away, incaking the attachments of the teath, and can ong their fin. I less by dropping out.

This trouble can be relieved by getting your dentist to conceve tariar and dening the teeth, and then, by accept the west Some Cone Moorn Wash, full sineagh, once daily, and closing them with the Wash, distingt, twice daily, until the gums are hard

and the teeth firm v attached again.

Mercurial Poisoning or Salivation.

The gams are red and inflamed, become soft and spency, and blied from the sightest touch; the

breath it offensive, and to be metallic.

To relieve, if the game are very turged and swellen sear by, oblipping out the turge of growth between the reath, and bloods garrens. Then apply Houses' some Come Moran Wasn, tall strength, twice daily. In a blitton, pour a tablespecular nato tought tumbler of water and rinse the mouth three or four times daily until cured.

Epitholioma.

Ragged ulcers appear on the lower lips, the inflamnation spreading, until sometimes involving the submaxillary lymphatic glands.

Apply Hornes' Sere Cere Moeth Wash, full

. . . h, and case mouth with Wash, dilur 1.

Sore Mouth of Nursing Women.

This is a form of ulcerative inflammation of the mouth, peculiar to women while suckling, or in advanced stage of pregnancy. The first symptoms are indicated by a loss of taste and a sensation similar to that produced by scalding liquids. It is generally very sudden in its attack. This, followed by the appearance of one or more tumors on the side of the tongue, which after a time ulcerate, produces very painful sores, with hard borders and a circle of inflammation around them. The disease is at first local, but if not arrested is apt to extend to the fauces and asophagus, producing irritation of the stomach and howels, and diarrhoa, resulting finally in emaciation and death.

To reheve, apply Holmes' Sure Cure Mouth Wash, full strength, twice daily, and rinse mouth,

with Wash diluted, several times daily.

Senrvy.

The gums are spongy, bleed easily, ulcerate and

slough, and the fetor is exceedingly offensive.

The best local remedy is Holmes' Sure Cure Mouth Wash, applied full strength, twice daily, and a diluted Wash used several times a day. Constitutional treatment in extreme cases of scurvy will be required in connection with the Wash used as above.

Apthæ, or Follicular Ulceration.

Between the lips and gums, and under the tongue, appear transparent vesicles. As the disease increases, the mucous membrane around inflames, the vesicles burst and spreading ulcers come.

Apply Holmes' Sure Cure Mouth Wash, full

strength, and rinse mouth with Wash, diluted.

Ulcerative Stomatitis.

The gums thicken, become congested and bleed freely, caused by the ulceration which begins on them, spreading to the whole mouth, particularly in the lower division. It even involves the mucous membrane of the mouth, producing painful and serious results.

To relieve, apply to the ulcerated patches Holmes' Sure Cure Mourn, Wash twee daily, rinsing the mouth twice daily with the Wash, diluted.

A Simple Form of Stomatitis.

Small, raised, reddish, glistening patches formed on the mucous membrane constitute this disease.

To relieve, apply Hotmes' Stre Cire Mouth Wash three times daily, full strength, until cured.

Thrush.

Small, white spots appear on the tongue, palatevelum and inside of check and lips.

Apply Holmes' Sure CURE MOUTH WASH, full

strength, direct to spots, twice daily.

Syphilitic Inflammation of the Mucous Membrane of the Mouth.

The gums become swellen and ulcerated around the margins, laying bare the necks of the teeth; a bloody, viscid, lichy, offensive discharge is thrown out; the disease spreads and involves other membranes and produces serious results.

In connection with the constitutional treatment, Holmes' Sure Cure Mourh Wash, is a valuable adjunct, and should be applied, full strength, to the discussed parts, three times daily, and the mouth

rinsed often with the Wash, driuted.

Epulis.

Ulcerative patches with inflamed margins, and spreading ulcers on the gums.

Apply Holmes' Sure Cure Mouth Wash, full strength.

MULTUM IN PARVO.

Holmes' Sure Cure Mouth Wash and Dentrifice.

A splendid dentrifice for cleaning the teeth, keeping the gums healthy and purifying the breath.

A sure cure for diseased gums, commonly called scurvy.

A sure cure for bleeding gums.

A sure cure for bad or foul breath.

A sure cure for bad taste in the mouth.

A sure cure for ulcers or sore mouth.

A sure cure for nursing sore mouth.

A sure cure for neuralgia, caused by diseased gums.

A sure cure for indigestion, caused by diseased gums.

A sure cure for sleeplessness, caused by diseased gums.

A sure cure for healing and hardening the gums after extraction of teeth.

Cures diseased gums and tightens loose teeth ceased by tarter) after your dentist has removed tarter and cleaned teeth.

Sure cure for any and all diseases of the gums and mouth.

Differences. - To use as a dentrifice, wet the brush with water, pour five drops of the wash on, brush the teeth twice daily. To cure severe diseases of the gams and m ath, and to tighten loose teeth, get your dentist to remove tartar and clean teeth, apply the wash daily, full strength. For ordinary cases, pour a tablespoonful in a tambler and add double the quantity of water, rinse the mouth twice daily. If too strong, dilute to suit the case. For any and all ulcers, putrid sores and inflammation involving the membranes of the oral cavity, there is no remedy more effective or equal to Holmes' Stree Cure Mouth Wash. It has been used successfully in sore throat and ulcerated fauces when properly diluted and carefully applied.

We ask your special attention to some of the many we could produce of the testimonia's of the efficacy of Hornes' Scrie Cure Morri Wash, from divers sources and places. Please read them and see what others think of its virtues.

TESTIMONIALS

OF THE VIRTUES OF

HOLMES' SURE CURE MOUTH WASH

All Claimed for It.

GAINESVILLE, FLA., March 12, 1884.

Drs. Holmes :

DEAR SIRS-It affords me pleasure to be able to say that HOLMES' MOUTH WASH has proven, in my hands, all the proprietors claim for it.

Yours very respectfully, W. L. SEIGLER.

Sorry He Didn't Use it Long Ago.

WASHINGTON, GA., November 20, 1882.

Drs. J. P. & W. R. Holmes:

I have had occasion to use your Mouth Wash lately-am sorry I did not do so long ago. In mouths with horrid breath, caused by diseased, inflamed gums that would bleed at the slightest touch, after removing tartar and searifying gums, its action was almost immediate. The patients were delighted, and I would not be without it.

H. B. KEMME. Yours truly.

A Case of Pyorrhea Alveolaris (ured by Holmes' Mouth Wash.

EUFAULA, ALA., March 22d, 1884.

Dr. J. P. & W. R. Holmes:

GENTLEMEN - I have been using HOLMES' STRE CURL MOUTH WASH in my practice for several years. It has given perfect satis action, and is all you claim for it. For treating diseased gums it has no superior, I will mention one case specially, in which it was most successfully used. A young lady of New York, sojourning in this place, called on me in June, 1883, suffering very much with her lower teeth. Ali of them were sore and loose to such an extent that she could not bear the slightest touch upon them without almost going into spasms. I found the teeth very loose, gams badly diseased, very much swollen and inflamed; in other words, her mouth presented a well defined and advanced stage of Pvornham Alveolaris. On account of the extreme tenderness, I was unable to use my instruments at all at first sitting, but I applied Holmes' Wash, full strength, two or three times, giving her a bottle, with instructions to use it whenever the gums pained, and to return on the second day. She did as directed, and the soreness was so removed that I had no trouble in using the scalers and removing the tartar thoroughly. I continued the us of your Mouth Wash, and at the end of three weeks dismissed her, cured. I saw her a few days ago, and she told me that her gums and teeth had not given her a moment's pain sirce I dismissed the case. Tuse Horms' Morth Wash whenever I find discased gums, after removing tartar, extracting teeth, erc. In fact I would not know how to get arong without it. It should be in every dental other,

> Very truly yours, T. M. ALLEN, D. D. S.

A severe case of Nursing Sore Mouth cured— Aphthous Spots cured.

HILLSBORO, N. C., March 21, 1884.

Drs. J. P. & W. R. Holmes:

DEAR SIRS-Your letter asking with what success I had used your Mouth Wash, reached me some days ago, just as I was leaving home, hence the delay in answering. The most marked case of cure that I have had was with my wife. Some two years ago she had a severe attack of nursing sore mouth. Our physician was called in, and with great difficulty, considerable delay, and much suffering, he finally subdued it. Last fall she had a recurrence of it again. I ordered your "Mouth Wash" which subdued it in a few days. Indeed we have used it in the family occasionally ever since, and always effected Two or three applications will cure aphthous spots in the mouth. Another cure was a lady who came to my office to have some work done. I found her saliva thick and ropy—the gums congested and bleeding at the slightest touch. She used your Wash and was benefited. I did not have an opportunity to see her again, but asked her to let me know whether she was benefited by it. She said it helped her greatly.

It is an excellent preparation, and should be in

the office of every dentist.

Yours truly, C. A. ROMINGER.

Right Successful with It.

Jackson, Miss., March 13, 1884.

Drs. J. P. & W. R. Holmes.

GENTS-I have been right successful with your MOUTH WASH. Cases that I have treated have been very much benefited by it.

Yours, etc., I. B. REMBERT, D. D. S.

Have Used Sufficiently to Test its Efficacy—A case of Distocation of Teeth and Fracture of Process Treated with Holmes' Mouth Wash, Successfully.

ORLANDO, FLA., March 12, 1884.

Drs. J. P. & W. R. Holmes:

DUAR SIRS In using your MOUTH WASH for two years or longer in my real tipe. I have had not coable strances for to thig its officary. One was the case of a young contliming, who, by an accident, had his four natural or knowled in so much a to, in part, Islandge all of them, and sererely fracture the proess In the ding the case, after proper surgical steps, I used your Mouth Wash mopping the gams thoroughly with it, sitting after sitting, absolutely keeping away inflormination, which, under the eigennstances, seemed sure to come, and reaching, finally, t very successful result. That your Mourn Wash was a very important factor in this case, there is not I shad w of doubt. The case was an interesting one to me, but its entire manage neut not being a subject for this paper, I will not give it.

I are your Wash continually as an astringent after extraction, and as a wash after cleaning teeth where the gams are accrated, for diseased gams, and have

always found it good.

Yours very respectfully,

H. M. GRANNISS.

A Most Excellent Preparation.

TROY, ALA., June 22, 1883.

Drs. J. P. & W. R. Holmes, Macon, Ga. :

Gentiemen - I have used Holmes' Mouth Wash, and think it is a most excellent preparation.

Very respectfully,

E. H. LOCKE.

Sloughing from Necrosis Cured—The Wash Cheerfully Recommended.

BLACKVILLE, S. C., June 22d, 1884.

Drs. J. P. & W. R. Holmes, Macon, Ga.:

Gents—Holmes' Mouth Wash has given me entire satisfaction, and possesses all the merits claimed for it. I have been using it twelve months, and most cheerfully recommend it. I will mention one special case which I had and is of some interest, where Holmes' Mouth Wash was used to advantage, viz:

A young medical student of this place, who, in the Spring of 1881, had the left superior wisdom tooth extracted in Sumpter, S. C., much sloughing and alveolar process came away for three months after. It then became sluggish and discharged pus occasionally, from the socket, and would bleed from the slightest touch. Thus it kept on, not healing any more until I saw the case in the Summer of 1882, one vear and two months from date of extraction. That was the history of the case when it came into my hands. I treated the case one month with Carbolic Acid and Iodine of different strength without any perceptible change. The sloughing was so extensive that the palatine roof and posterior buccal root of left superior second molar, next to the extracted wisdom tooth had become exposed to the end of the root. This large hole, formed by the two exposed roots and deep cavity in the process, through which I could feel the bones, was such a bad place to eatch foreign matter that I extracted the second molar. This then gave me a better view of the diseased parts, and I commenced treating with aromatic sulphuric acid and tannin which treatment I kept up for several weeks, without any perceptible change. I could wipe pus out of the very deep socket with bibulous paper every time he came. At this stage of the case I ordered half a dozen bottles of Holmes' Mouth Wash, and as soon as they came I sent for my patient and applied the Wash, full strength, giving him one bottle and

directions for use. I saw him one week later and his mouth was much improved; cleansed socket good, found a little pus and the edges of the all color process we elver bare. I treated it with the Wash, full strength, and gave him another bottle; saw the case in two we as more and found the cavity healing rapidly and free from pus. In a short time after he was entirely well and is still blessing Holmes Mouth Wash.

Respectfully,

J. H. E. MILHOUS.

AN EXCELLENT REMEDY.

Cured Gums that bled from Slightest Touch—Good for Ulcerated and Inflamed Mouths.

BANLEY, GA, April 11th, 1881.

Drs. J. P. & W. R. Holmes, Macon, Ga .:

GENTLIMEN I have been using your Mouth Wash for a long time, and find it an excellent remedy to remove the soreness and heat and harden the gums after extraction of teeth. In cases where tartar has formed on the teeth and the gums become so soft and tender until they would bleed from the slightest touch of a toothbrush, I have used your Mouth Wash with the most sati-factory results. I first carefully remove the tartar, and apply the Wash according to directions, and direct the patients to wash their teeth at least three times a day with a good medium stiff brush, using the Wash just after washing the teeth. The result has been, where patients followed the directions closely, in a few days the soreness was gone and the gams hard and tough, so they could wash their teeth without any pain or sign of gums bleeding. In cases of ulcerate I and inflamed mucous membrane of the month, I have found it to be an excelent remedy. In fact, I believe it to be all that is canned for it, and therefore take pleasure in recommending it.

Very respectfully,
B. H. PATTERSON.

Don't Want Anything Better-It is the Very Wash Desired.

CLAYTON, ALA., April 1, 1883.

Drs. Holmes:

SIRS—I think you would like to know how your MOUTH WASH is succeeding in my hands. Allow me to say I have tried it. I don't want anything better. I believe it to be the very Wash desired. I find that it cures diseased gums, after tartar has been taken off, in a few days. I will mention a case I had a few days

ago:

A young man came into my office to have his teeth filled. I saw that his gums were badly diseased and very swollen, and, in filling them, if I touched the gums, they would bleed. I have never been able to fill teeth successfully with cavities half full of blood. I decided to treat his gums first. I gave him one bottle of the Wash and advised him to use it as directed and to come back in three or four days and I would fill his teeth. He did so. I filled his teeth with gold instead of blood. His gums were about well.

I will mention one more case, and close:

I met a minister of the Gospel on the street. He said he was suffering with users in his mouth, and could scarcely talk or eat. I sold him a bottle of your Mouth Wesh at cost, and applied it to his mouth in my office. That was on Friday. He told me afterwards that on Sunday he was able to preach without any difficulty. In a few days his mouth was well. He advised me to keep it on hand all the time; that he had cured half a dozen mouths with that bottle, and had some left and sent that to a man having a chronic sore mouth, and he believes that it would cure him.

I am carried away with your Mouth Wash. Will order another dozen bottles soon, as I am about out.

J. T. FLOYD.

Valuable as a Styptic Wash After Extracting Teeth, etc.

MACON, GA., April 8, 1882.

Drs. J. P. & W. R. Holmes :

Dear Size. I have been using your Grm Wesh in my process now for over two years and find it a most excellent adjunct in the treatment of diseased gums, which we so offen most in the oral cavity of all classes of parents. I find it to be particularly valuable as a stypic wish for the gums after extracting one or more teeth. It prevents sopeness or swelling of the gams to a great extent, and adays the after pairs and causes the grans to he all year readily. I can can rightly recognised it as a valuable preparation for the dental office.

Very respectfully yours,
W. W. FORD,
President Georgia State Dental Society.

" Old Sore Mouth " Cured in Ten Days With One Bottle.

CIDAR KRYS, FLA., May 25, 1883.

Drs. J. P. & W. R. Ho'mes:

Dear Sussel only commenced to use Holmes' Motern Wash about two months ago, and I am well proceed with it. It is the only wish that I have to not that will do the work in such a short time and so thoroughly. After extracting teeth, or removing factor, it is particularly benefic at. I tried one bottom as an "ord sore month," as the patient expressed it, and cored it in ten days. I am sorry I did not commence to use it earlier.

Yours respectfully.

. JAMES CHACE.

Good for Any Kind of Sores in the Mouth, and I Cannot Hesitate to Recommend the Wash in the Highest Terms.

ALAFIA, FLA., March 27, 1884.

Drs. J.P. & W. R. Holmes:

Dear Sirs—You wish to know how I like your Mouth Wash. I could not be better pleased with any Wash than I am with yours. It is not only good for the mouth, but for any kind of sore—in the mouth and out. I have tried it in various ways, and in every case found it good. I cannot hesitate to recommend it in the highest terms to the public. I shall make an order soon for a dozen or more bottles.

Respectfully.

MATTHEW WIGGINS.

Used With Most Satisfactory Results——A Most Excellent Remedy After the Extraction of Teeth, for Diseased Gums, etc.

FAYETTE, MISS., March 14, 1884.

Drs. J. P. & W. R. Holmes:

Gentlemen—I have used your Mouth Wash with the most satisfactory results. I find it a most excellent remedy to heal and harden the gums after the extraction of teeth. In cases where tartar has formed on the teeth, forcing the gums from their place, causing them to become so very soft and tender that they bleed at the slightest touch, I remove the tartar and apply the Wash as directed, and instruct the patient to use it after washing the teeth. In every case it has done its work quickly and well.

Very respectfully, W. C. STEWART, D. D. S.

The Best Wash Ever Used Acted Like Magic.

The first case to treat with Holmes' Mouth Wash that has not been cured—cannot say enough in its praise.

Wilmington, N. C., April 1st, 1884.

Dr.s J. P. & W. R. Holmes:

Dear Sires—We consider Holmes' Mouth Wash by far the best we have everused. Our first case was a patient who had been under the care of one of our best physicians for some weeks without deriving any benefit. After removing the tartar from his teeth we made an application to his gums and gave him a bottle to use. He returned in a few days, saying that the first application accord like magic, in fact had cured his gums. We have yut to have the first case to treat with Holmes' Moule Wash that has not been cured. We cannot say chough in its praise. Please send us another dozen builles by Express.

Very truly yours, FREEMAN & BALDWIN.

Used with the very best results one Bottle will cure from 3 to 5 cases.

WHITE SPRINGS, FLA., March 18, 1884.

- Drs. J. P. & W. R. Holmes:

Dear Sirs - I have used your Mouth Wash myself with the best reserts. If you can get your patients to use the Wash three or four days before a moval of tartar the gums will heal much faster and bleed less. For ordinary cases of tartar, bad breath and bleeding gums, one bottle will cure from three to five cases.

I recommend it to do all you claim for it.

Respectfully,

Dr. W. A. McQUAIG.

A Lady Saves Her Teeth Ten Years by Use of Holmes' Sure Cure Mouth Wash,

Read the following testimonial one of many which could be obtained from those who have realized the beneficial effects of Holmes' Mouth Wash, from one of Georgia's most hon-red and trustworthy citizens, for long years chief editor and proprietor of the Macon Daily Telegraph and Messenger:

Macon, Ga., July 20th, 1883.

Drs. J. P. & W. R. Holmes:

SIRS—Some ten years ago my wife put herself under your professional care. Her case was a peculiar one. She had sound teeth, but by an hereditary disease of the guns they had become so exposed and loose that she had been dentally advised that they must be removed at once, that it was "as impossible to save them as it was to raise the de.d." You, on the contrary, insisted that by treatment they might be saved for years. This has, so far, been done success fully, so that by treatment and the constant use of your admirable Holmes' Mouth Wash, her teeth still remain, and I am bound to say that had she been able to follow your directions closely, they would have been firm to date. I cannot sufficiently commend the efficacy of your treatment and remedies for diseased teeth.

Yours respectfully.

JOSEPH CLISBY.

The Right Thing in the Right Place.

LUMPKIN, GA., March 14, 1884.

Drs. J. P. & W. R. Holmes:

GENTS-I have used your MOUTH WASH and find that it is everything you claim for it: "The right thing in the right place.

Yours, etc., J. A. THORNTON, Jr.

recsons Who Have Used it Give Praise. From a Physician and Dealer in Drugs,

KALLELISVILLE, TIXAS, March 19, 1884.

Drs. Holmes :

Green with a Year Morru Wash has not been tried by mesself sufficiently to say as to its efficiency. You are aware that, as a regular physican. I cannot a commend any preparation without knowing the formula. Per one that have used your Morru Wash as a general thing praise it.

Yours truly, J. E. LAY, M. D.

A Burning Sensation of the Month and Gums Relieved.

St. Archester, Fra., June 24, 1883.

Drs. J. P. & W. R. Holmes:

DEAR SIRS A young man called on me lately for obvice. He was troubled very much with a burning see alon of the meath and gums. I tried several liferent washes, which only afforded relief temporarity. I then sent and got some of Hollies Mochil Wash. Three applications relieved him, and one bottle has cured him.

Very respectfully,

A. B. PHILLIPS.

Acts Like a Charm.

Manison, Gr., October 8, 1883.

Drs. J. P. & W. R. Holmes:

Charm. Yours, etc.,
STOKES BROS.

A Case Like Scurvy, of Five Years' Standing

WINSBORO, WOOD Co., TEXAS, Feb. 2d, 1883.

J. P. & W. R. Holmes, Macon, Ga .:

Dear Sirs—Please send me one dozen bottles of your Mouth Wash by Pacific Express, to Winsboro, Texas. It excels any other Mouth Wash I have ever used. In this locality there are many people troubled with diseased gums, commonly called scurvy. In each case where I have used the Mouth Wash a cure has been effected. I cured one case of chronic sore mouth of five years' standing. The party had paid out one hundred dollars, and I cured him with your Wash and only cha ged him ten dollars. I cannot get along without it.

Respectfully yours,

W. N. JONES, D. D. S.

POSSESSES EVERY MERIT CLAIMED FOR IT. It acts Like a Charm to Heal Gums After Extraction of Teeth.

MINDEN, LA., June 27th, 1883.

Drs. J. P. & W. R. Holmes:

Dear Sirs—I have been using Holmes's Mouth Wash in my practice for some time. I find it to possess every merit you claim for it, and think no dentist should be without it. For healing and hardening the gums after the extraction of teeth, preparatory for a plate, and also for applying to the gums after the removal of tartar, it acts like a charm.

My patients say in the extraction of the teeth the use of the Mouth Wash rapidly relieves after pains, and soon heals and hardens the gums for the plate.

Respectfully,

E F. LEWIS.

A WASH LONG DESIRED.

A Set of Teeth Saved by it.

WALKELVAR, FLA., August 18th, 1883.

Drs. J. P. & W. R. Holmes:

DEAR SIRS-The HOLMES MOLTH WASH came through safely, and as far as I have used your Mouth Wash, I find it to be the wish long desired. It is a sure cure for diseased gums after tartar has been removed. I will mention one case in my practice where it proved its worth. A young in in came to me about three weeks upo to have his testin extracted. I exam ned his teeth and found them to be perfectly sound. After removing quite a quantity of tartar that had accuma ated around them, I tound the alveolar process bully discussed. I insisted on him not to have the teets, extracted, but to give your wash a fact trial. He has used one half of a bottle of the wash, and his coms are now in a healthy condition, and of course the patient is highly delighted. The Wash is all that is claimed for it, and I will take pleasure in recommending it. Respectfully,

A. L. GRANGER, D. D. S.

Homer, La., Feb. 1, 1884.

Drs. J. P. & W. R. Holmes:

Gentlemen—I introduced your Month Wash in this parsh a year or so ago. It has given universal satisfaction, and there is a good demand for it. There are many people with diseased gums who would be glad to have your Wash. If you will ship me one hundred bottles to Areadia, La., to sell, I will willingly do so. I will be travelieg over the parish a great deal, and do not think, from what I know of the demand, that it will take me but a shirt white to disple of them. There is no telling the amount could be sold by introducing it in this way—I mean, to sell it by the bottle.

Respectfully,
T. N. NIX

CURED SOME OF THE WORST CASES OF DIS-EASED GUMS.

Cured Ulcers and Sores in the Mouth, of Seven Years Standing.

RIPLEY, TITUS Co., TEXAS, Aug. 18, 1883.

Drs. J. P. & W. R. Holmes:

DEAR SIRS-The HOLMES' MOUTH WASH I ordered from you came safely to hand. I have used only two bottles so far, and though my experience with the Wash is short, I have found it to be a most perfect success. I have cured some of the worst cases of diseased gums. I will mention one case where the Wash relieved a mouth from a bad condition. Nearly a year ago I met a man who had been troubled with ulcers and sores in his mouth for six or seven years. He said he had paid out so much mon v on his mou b, without being benefitted, he had decided not to pay any more unless a cure was guaranteed. When your Wash came, I again met him, and concluded to take the case and try Holmes's Mouth Wash, I gave him a small vial of the Wash and in a short time he came and got some more, and did so two or three times, when he told me his mouth was much better. I heard from him a few days ago, and he said he had never been bothered a minute since with his gums and mouth.

I believe that if every dentist who can get a bottle of Holmes's Mouth Wash, would try it, he never would use any of er Wash. I would not be without it.

Yours respectfully,

W. J. DELAFIELD, D. D. S.
